PROFESSIONAL SUMMARY

- Data Analyst with 3+ years of experience in Power BI, SQL Server, Python, and business intelligence, delivering data-driven solutions for sales, marketing, and operational analytics.
- Skilled in dashboard development, data modelling, forecasting, automation, and machine learning, enabling faster decision-making and reducing manual reporting efforts by 70%.
- Experienced in developing scalable reporting systems, SQL automation workflows, and interactive Power BI dashboards using enterprise data sources.
- Strong background in statistics, business problem-solving, and translating complex data into actionable insights.

WORK EXPERIENCE

Prism Johnson Limited – Cement Division

Sep'22 – Present

Role: Data Analyst

Built enterprise-level reporting and analytics solutions using SQL Server, Power BI, SSAS, and Python for sales and marketing functions. Automated reporting and validation workflows, improving reporting efficiency and reducing manual effort across business teams. Collaborated with cross-functional stakeholders to develop KPI dashboards, forecasting models, and customer analytics solutions supporting strategic decision-making.

Project: Lead Conversion Prediction

- Developed machine learning models using Logistic Regression, Random Forest, and XG Boost to improve lead prioritization and support data-driven sales targeting.
- Identified high-conversion customer patterns through EDA and feature engineering, improving model effectiveness and business interpretability.
- Optimized model performance using GridSearchCV and cross-validation techniques across precision, recall, and F1-score metrics.
- Delivered feature importance insights enabling sales teams to focus on high-potential leads and reduce low-quality follow-ups.

Project: Gmail Auto-Summarization

- Developed an automated Gmail summarization pipeline using NLP techniques to extract and structure operational insights from large-scale email data.
- Built regex-based validation logic to identify and track RR numbers with high accuracy across email threads.
- Applied TF-IDF and contextual keyword matching techniques to generate concise case summaries and improve issue tracking efficiency.
- Improved traceability and reduced manual email review efforts through automated content extraction and summarization workflows.

Project: Customer Segmentation using RFM

- Developed an RFM-based customer segmentation model to classify customers based on engagement and purchasing behaviour.
- Applied K-Means clustering to identify high-value and at-risk customer groups for targeted retention strategies.
- Designed weighted scoring frameworks to evaluate customer value and improve segmentation accuracy.
- Enabled data-driven marketing decisions by translating analytical outputs into actionable business segments.

Project: Time Series Forecasting

- Developed forecasting models using SARIMA, Holt-Winters, Prophet, and Auto-ARIMA techniques to support business planning and trend analysis.
- Reduced forecast error (MAPE) by over 50% through parameter optimization and model benchmarking.
- Implemented rolling validation and residual diagnostics to improve forecasting reliability and prevent overfitting.
- Generated 12-month business forecasts with confidence intervals to support strategic decision-making.

Project: SQL and Data Automation

- Designed and optimized SQL Server data models including fact and dimension tables to support enterprise reporting and analytics.
- Developed complex SQL queries, stored procedures, CTEs, and window functions for efficient large-scale data processing.
- Automated reporting workflows using SQL Server Agent, reducing manual intervention and improving data reliability.
- Built and deployed SSAS OLAP cubes enabling scalable multidimensional analysis and faster report generation.
- Managed ETL and data warehouse pipelines ensuring high-quality, reliable data for downstream dashboards and reporting systems.

Project: Power BI Dashboard

- Developed 8+ interactive Power BI dashboards for sales and marketing analytics, reducing manual reporting effort by 70%.
- Designed KPI dashboards tracking revenue, active users, YTD, MTD, MoM, and YoY performance trends for business stakeholders.
- Integrated enterprise data sources including SQL Server, SSAS, Excel, and Google Sheets into centralized reporting solutions.
- Optimized Power BI data models and Power Query transformations, improving report refresh performance by 50%.
- Implemented drill-through analysis, slicers, bookmarks, and dynamic visualizations to enable self-service analytics.
- Automated scheduled refresh processes using On-Premises Data Gateway, improving reporting efficiency and reducing processing time.

TECHNICAL SKILLS

Programming & Database: MS SQL, SQL Server, Python, Pandas, NumPy

BI & Visualization: Power BI, MS Excel (Advanced Excel, Pivot Tables, Power Query)

Data Engineering & Warehousing: ETL, Data Warehouse, OLAP Cubes, SQL Server Agent

Analytics & ML: Machine Learning, Forecasting, EDA, Regression, Time Series Analysis, NLP

EDUCATION

M.Sc. Statistics (B.H.U), CGPA: 8.99

Jul'20 – May'22

B.Sc. Statistics (B.H.U.), CGPA: 7.90

Jul'17 – May'20

CERTIFICATIONS

- Microsoft Power BI Desktop for Business Intelligence from UDEMY.
- Certified with the award "Marvelous Performance in Data Analytics" at Prism Johnson Limited.
- Certified in SQL, Python for Data Science and Machine Learning Algorithm by Great Learning.
